

TOPIC**C PROGRAMMING****SESSION****SESSION_3 (Functions)****GRADE****0.5%****REQUIREMENTS**

Implement a program that takes from user two numbers and pass them to a void function called swap.

This function receive the two numbers in two variables x and y and print the two variables then swap their values and Print x and y again after swapping.

EXAMPLE

```
C:\Users\AMIT\Desktop\swap\bin\Debug\swap.exe
Enter first number:
5
Enter second number:
8
befor swapping
x = 5    y = 8
after swapping
x = 8    y = 5

Process returned 0 (0x0)   execution time : 7.625 s
Press any key to continue.
```

+ POINT

Do not use a third variable inside the function.
